Workshop Complexity 2-

Employees can create their Profiles within the system.

Console Option-
Update your Profile

When Employee go to this option-
Sytem will ask some Questions to know more about the employee and their food taste.

Example-
*Please answer these questions to know your preference*s

1) Please select one-
- Vegetarian
- Non Vegetarian
- Eggetarian

2) Please select your spice level
- High
- Medium
- low

3) What do you prefer most?
- North Indian
- South Indian
- Other

4) Do you have a sweet tooth?
- Yes
- No

Save the Profile data and use this data to recommend Food Items and give them Notifications.

Recommend Food Items-
When Chef is recommending some Items-
It should sort based on their preferences, system will use the data and recommend them the Food Items.

It should be part of Choosing Next Day Menu Item.

Input-

Chef will roll out some options for breakfast
1) Poha 2) Boiled Eggs 3) Sandwich 4) Aloo Paratha

System will look into the Profile data and if employee is Vegetarian, system will sort the food items according to that

Output-
1) Poha 2) Sandwich 3) Paratha 4) Boiled Eggs

Based on their data, system can give the preference also which item they can choose

Example- Because you like Spicy, you can go with Aloo Paratha
